## About Lawns

---

Success with lawns depends upon certain important factors such as soil condition, proper preparation of the ground, on purity and germinating qualities of seed used, on an ample food and moisture supply and on proper care of the lawn.

Proper seed is as important as any of those factors. Our seed is the highest quality obtainable, both in germination and freedom from weed seeds and foreign matter. With proper preparation and proper sowing our mixtures will make permanent, satisfactory and beautiful lawns.

Lawns require a certain amount of care after being established. Moderate feeding in both Spring and early Fall is advisable using a reliable fertilizer. Thorough watering is essential in dry weather. Rolling with a moderately heavy roller in early Spring when ground is moist but not soggy will prove beneficial. Our help is yours in solving your problems as how best to treat your lawns.
